

The Steppir antenna has 2 basic components the Antenna which mounts outdoors and the Controller which is placed next to your Radio for easy access, as such a control cable is necessary between the Controller and Antenna. The Antenna requires 4x22ga conductors for each element plus the DB series require additional conductors to select the driven element. All on the conductors carry a signal so we use a shielded cable to help protect the controller. Our pre-made control cables come with the mating connector for the Controller installed. The antenna end will be stripped and tinned for the Yagi cables (12, 16, 20 conductor) The vertical cables have connector on both ends.
